## SUMMARY

Analyst with experience in global financial operations at a leading consulting firm. Skilled in Advanced Excel/VBA automation, NetSuite, Tableau, and Power BI, improving close timelines, data quality, and dashboard reporting. Also building data analytics capability through SQL and Python portfolio projects, focused on converting raw data into clear, useful insights. Regularly collaborate with cross-functional teams across the UK, Ireland, Australia, and APAC, and support both finance and non-finance stakeholders with accurate reporting and audit-ready datasets.

## WORK EXPERIENCE

**Analyst** | Delta Capita Limited | Sept 2024 - Present | London, UK

- Rebuilt the monthly accruals & revenue reporting pack; automated project/employee mapping with VBA (auto-codes for new projects + XLOOKUP-ready tables), saving ~3–4 hours per cycle and improving auditability.
- Added automated validation checks (completeness, duplicates, unmapped codes), reducing manual corrections and increasing accuracy of project-level metrics used by leadership.
- Produced and presented monthly management reporting (accruals, revenue, project KPIs) to business leads and finance leadership, providing clear variance commentary to support decisions.
- Partnered cross-functionally with teams in APAC, Ireland, and the U.S. to set up accounts (e.g., Malaysia, Philippines) and meet audit/compliance requirements; coordinated responses to auditor queries.
- Produced clean datasets and coordinated with auditors and stakeholders, shortening sample turnaround by 3 days and improving query resolution.
- Resolved a complex client dispute by deep-diving 3 years of transactional data, presenting a clear root-cause narrative to stakeholders, and negotiating wave of £40K in proposed back-charges
- Built working-capital dashboards (AR/AP, cash, taxes) in tableau to surface risks early, reducing HMRC VAT/PAYE penalties by 20%.
- Managed and resolved audit queries across four regions (UK, Ireland, Australia, APAC), ensuring timely delivery of supporting schedules and evidence.
- Collaborated with cross-functional teams to deliver documentation and reconcile data, gaining strong exposure to regional controls and reporting differences.

## PROJECTS

**Sector-Wise Stock Return Leaderboard — Python Project**

- Pulled 1-year U.S. stock price data using yfinance and calculated total returns and daily returns with Pandas to compare performance across sectors.
- Identified sector winners/losers and extreme daily movers, presenting results in clean summary tables and visual graphs for portfolio use.

**Global COVID-19 Trends Analysis using SQL**

- Analysed global COVID-19 trends in SQL by combining deaths and vaccination tables, calculating case-fatality rates and % population infected/tested over time.
- Used GROUP BY, MAX aggregations, window functions, and CTEs to identify highest-impact countries and generate clear, portfolio-ready insights.

## EDUCATION

**Masters in Science in Finance** | University of Strathclyde | Jan 2023 – Jan 2024 | Glasgow, UK

- **Modules:** Accounting and Financial Analysis, Quants for Finance, Derivatives & Securities Management

**Bachelors in Accounting and Finance** | Maharaja Sayajirao University | Jun 2019 – May 2022 | Vadodara India

- **Modules:** Cost Accounting, Management Accounting, Business Laws, Statistics, Financial Accounting

## SKILLS

- Power BI • SQL • Advanced Excel (Pivot, XLOOKUP, Power Query, VBA) • Tableau • Cross-Functional collaboration
- Stakeholder Management • Python • Management Reporting • Budgeting & Forecasting • Variance Analysis • Scenario Planning • KPI Dashboards • NetSuite • SAP • Communication
